

CKE600-1F

KOBELCO

HYDRAULIC CRAWLER CRANE

CKE600

CRANE BOOM

Max. Lifting Capacity: 60 tons × 3.0 m

Max. Boom Length: 51.8 m

FIXED JIB

Max. Lifting Capacity: 6.6 tons × 16.0 m

Max. Fixed Jib Combinations: 42.7 m + 12.2 m

39.6 m + 18.3 m

The CKE600 crawler crane from KOBELCO takes advantage of new technologies to raise performance to new heights. Winches with extremely powerful line-pull handle the toughest jobs, while the innovative “wet-type” multi-disc braking system provides safe and sure control with minimal maintenance. A large winch capacity promotes ultra-smooth operation and enhanced component service life. An optional full-sized third winch enables the use of an impressive selection of attachments. Add these new features to the renowned power and reliability of KOBELCO cranes, and you have the ideal combination of lifting performance, economical operation and durability.

CKE600 Five Major Features

1

Excellent Performance for Diverse Applications

2

High-Performance Winch Accommodates a Wide Range of Jobs

3

Excellent Cab with Enhanced Functions

4

Excellent Transportability and Assembly

5

Safe, Environmentally-Conscious Design

KOBELCO's Awesome New Expression of Power, Speed and Efficiency!

TECHNOLOGY AND POWER

For precise and varied operation

Excellent Performance for Diverse Applications

Versatile Operation

The CKE600 has the power, structural strength, safety specs, and nimble operability needed to accommodate all kinds of jobs, from standard crane work to high-rise lifting and material handling work.

Crane Boom

Max. Lifting Capacity:

60 tons × **3.0 m**

Max. Boom Length:

51.8 m

Fixed Jib

Max. Lifting Capacity:

6.6 tons × **16.0 m**

Max. Fixed Jib Combination:

42.7 m + **12.2 m**

39.6 m + **18.3 m**

High-Output Engine

The engine has an impressive rated output of 159kW and complies with NRMM (Europe) Stage IIIA and US EPA Tier III exhaust emissions regulations. All of this power works with KOBELCO's unique Engine Speed Sensing (ESS) control system and new hydraulic systems to ensure stable and smooth simultaneous operations.

Engine Output:

159 kW

Meets NRMM (Europe) Stage IIIA

High-Speed Lifting Increases Work Efficiency

The main and auxiliary winches deliver a fast maximum hoisting and lowering speed of 120 m/min that improves operational efficiency on high-rise jobs.

Max. Line Speed (First layer):

120 m/min

On-Site Maneuverability

Independently driven hydraulic travel motors with planetary reduction units provide three steering modes (differential steering, skid steering and counter rotation) for optimal on-site maneuverability.

Max. Travel Speed:

2.4 km/h

Control Levers Connected Directly to Pilot Valves for Smooth Operation

The control levers regulate the pilot valves directly to reduce the amount of play and ensure smooth, precise hoisting start-ups and inching. Control is light and sure, with almost no clatter even over long operating periods.

Winch Speed Controller

The speeds of the main winch, auxiliary winch and boom hoist can be set independently with trimmer controls.

■ Hydraulic pilot system detects swing reaction force.

■ Electric throttle with a twist grip ensures sensitive engine control.

■ Red switch on the boom lever grip allows easy inching control for hoist, boom hoist, and travel. The operator can activate it without taking his hands off the boom hoist lever.

Durable operation for the toughest jobs

High-Performance Winch Accommodates a Wide Range of Jobs

Wide, Large-Capacity Winches for Smooth High-Rise Work

The wide hoist winches provide an impressive spooling capacity of 40 m on the first layer with a 22 mm hoist rope. Their large capacity and large diameter help to prevent uneven spooling and wear while ensuring smooth operation for high-rise work.

Spooling Capacity (First-Layer):

40 m

Large Third Winch (Optional)

Because of KOBELCO's innovative internal disc brake system and side engine layout, the optional third winch is the same size as the main and auxiliary winches, allowing for more attachment options and better operation coordination.

Winches with a Powerful Line Pull Handle Hard Work with Ease

Through the efficient match-up of a high-output engine and high-performance hydraulic motors, the winches deliver plenty of line pull for single-line work. There's also ample capacity for heavy loads when they first clear the ground, and other tough jobs.

Rated Line Pull (Single Line):

68.6 kN {7.0 tf}

Power Lowering and Optional Free-Fall

A choice of either power lowering mode or free-fall mode can be selected for the winch drum according to requirements.

Non Free-Fall Winch

Wet-Type Disc Brake System

KOBELCO's new oil cooled wet-type multi-disc brake system is first in its class and provides quiet, dependable braking power. The multiple discs are self-adjusting and self-equalizing. Forced-oil circulation keeps brake temperatures cooler during long, continuous operations and ensures smooth braking. The completely enclosed system eliminates the possibility of outside contamination, providing years of problem-free service life. In optional free-fall mode, the brake pedal is easily depressed to reduce operator fatigue.

Maintenance-Free Winches

Both types of winches are maintenance-free. The built-in wet-type disc brake for the free-fall winch has a forced-oil cooling system to prevent overheating, and requires no band adjustment or lining replacement.

Environmentally Friendly Design

Because there's no brake band, the brake operates quietly and doesn't generate lining dust.

For better man-machine communication

Excellent Cab with Enhanced Functions

Multi-Function LMI Display

The newly designed load moment indicator (LMI) system features a large, easy-to-read LCD display. The rated load, actual load, load ratio, and other information are displayed in large characters. Warnings and other items are displayed in color, and text messages and alarms alert the operator to prevent dangerous conditions from developing. Other information can also be displayed, including a rated load chart and rated load curve, in addition to a function that regulates the working range.

Multi Display

The easy-to-read LCD multi display provides information on the current status of such functions as engine rpm, maintenance, and on-board troubleshooting, so that the operator has an ongoing, real-time assessment of the machine's conditions at a glance.

Normal Displays

- Engine speed (Lifting height^{*1})
- Engine oil change interval
- Reeving number for the main/aux winch wire rope
- Low-speed switch status
- Wind speed^{*2}

^{*1} With the optional lifting height gauge installed

^{*2} With optional anemometer installed

Warning Displays

- Warning (malfunction, maintenance information, etc.)
- Self-diagnostic function (detects malfunctions in solenoid valves, sensors, etc.)

Clear, Panoramic View

The CKE600 has a new cabin design with sash-less front and top glass that provides a panoramic frontward and skylight view. The glass also has less curvature to minimize distortion. The front upper window has been broadened on both sides for a view that is 31 % wider than a conventional cab, while the top-window view is widened toward the rear.

Comfortable 940mm-Wide Cab

- Air conditioner
- Fully adjustable, high backed seat with a headrest and armrests
- Intermittent wipers and window washers ■ Sun visor ■ Roof blind

■ Luggage tray

■ Cup holder

To ensure safe assembly and increase actual working hours

Excellent Transportability and Assembly

Crawler Retraction to 3.2 m Designed for Easier Transport

With its crawlers retracted, the CKE600 measures just 3.2 m wide for easy transport. Total transportation weight (including boom base, gantry and crawlers) is 40.5 tons, complying with transport regulations in Europe and helping to reduce the number of trailers required.

Transport width: 3.2 m Transport weight: 40.5 tons

Self-Removal Device

KOBELCO has designed the CKE600 to be assembled and disassembled without the need of an assist crane by employing a counterweight self-handling system. The complete crane can be transported on three trucks (each under 45 tons) and assembled by three men in less than half a day.

Boom Assembly/Disassembly Mode

The boom assembly/disassembly mode, which is used to release the over-hoist prevention function to facilitate boom assembly and disassembly, is activated with a switch located under the multi-function LCD display of the load moment indicator (LMI). (This switch is different from the switch that releases the auto-stop functions for over-load and hook over-hoist.) When the boom is lifted to a certain angle, it is automatically deactivated and the LMI function is automatically re-engaged to ensure that the boom assembly/disassembly function is used only when needed.

Efficient Transport of Attachments

Upper Spreader Storage Guide

Upper spreader storage guides make it easy to connect guy cables.

Gantry Cylinders

Gantry cylinders simplify gantry raising and lowering.

No compromise in KOBELCO's safety policy

Safe, Environmentally-Conscious Design

Automatic Soft-Stop Function Reduces Shocks

This function is activated automatically when boom lowering or boom hoisting is stopped by the over-load prevention system and the over-hoist prevention system. It makes for a smooth stop and reduces dangerous swinging of the load.

Automatic Stop Release Switch with Safety Function

The automatic stop system prevents over-load, hook over-hoist and boom over-hoist. To deactivate the system, a two-stage release procedure is employed that uses a master key and separate switches. This makes it easy to supervise the use of the single key and prevent unauthorized release of the automatic stop system.

Safety Functions of the Optional Free-fall Winch

Free-fall with Monitoring and Lock Functions

Free-fall operations can only be initiated by releasing the lock using a key switch. Unless the lock is released, free-fall cannot occur even if the switch is put in the "neutral-free" position. Also, to prevent the free-fall mode from being activated accidentally because of system malfunction, a monitoring function monitors the free-fall clutch cylinder pressure in the winch.

Free-fall Switch with Interlock

The free-fall switches are strategically located on the hoist levers, allowing the operator to engage free-fall without removing his hands from the control levers. To prevent the load from accidentally dropping, the interlock function makes it impossible to initiate free-fall unless the foot brake is fully depressed.

⚠ To prevent the load from accidentally dropping because of operator error, do not use free-fall when lifting.

Other Safety Features

■ Function lock lever helps prevent accidental operation when the operator enters or leaves the cab.

■ Directional markings on the crawlers make it easy to see which direction the crawlers will move.

■ External lamp for over-load alarm notifies surrounding workers of the load condition.

■ One-way call supports the safety of onsite personnel (optional).

- Swing flashers and warning buzzer warn surrounding workers when the machine is swinging.
- Cameras and color monitor provide views of the rear of the machine, and the main and auxiliary winches (optional).

Side-Engine Layout for Easy Maintenance

A new engine layout on the side of the machine provides easy access for routine inspections and servicing. Maintenance crews can access the entire power plant just by opening the side door.

Super-Fine Filter, a Long-Life Filter for Hydraulic Oil

Large-capacity, super-fine filter is made of a high-performance filter medium consisting of glass fiber reinforced with steel wires. The replacement cycle is extended to four times longer than that of conventional filters to reduce lifelong operating costs.

Photomicrograph (× 250)

Super fine filter (glass fiber)

Conventional filter (paper fiber)

Conforms with European Exhaust-Gas and Noise Regulations

The CKE600 meets NRMM Stage IIIA exhaust emissions regulations in Europe, and is designed with advanced KOBELCO low-noise construction technologies to comply with European Noise Regulations.

Main Specifications (Model: CKE600-1F)

Crane Boom	
Max. Lifting Capacity	60 t/3.0 m
Max. Length	51.8 m
Fixed Jib	
Max. Lifting Capacity	6.6 t/16.0 m
Max. Combination	42.7 m + 12.2 m, 39.6 m + 18.3 m
Main & Aux. Winch	
Max. Line Speed	120 m/min (1st layer)
Rated Line Pull (Single Line)	68.6 kN {7.0 tf}
Wire Rope Diameter	22 mm
Wire Rope Length	180 m (Main) 130 m (Aux.)
Brake Type	Spring set hydraulically released (Negative)
Free-Fall Brake Type	Wet-type multiple disc brake (Optional)
Working Speed	
Swing Speed	4.0 min ⁻¹ {rpm}
Travel Speed	2.4/1.5 km/h

Power Plant	
Model	Hino J08E-TM
Engine Output	159 kW/2,000 min ⁻¹ {rpm}
Fuel Tank Capacity	400 liters
Hydraulic System	
Main Pumps	3 variable displacement
Max. Pressure	31.9 MPa {325 kgf/cm ² }
Hydraulic Tank Capacity	440 liters
Self-Removal Device	
	Standard counterweight removal
Weight	
Operating Weight*	Approx. 56.7 t
Ground Pressure	77.5 kPa {0.79 kgf/cm ² }
Counterweight	15.2 t
Transport Weight**	Approx. 40.5 t

Units are SI units. { } indicates conventional units.

Line speeds in table are for light loads. Line speed varies with load.

* Including upper and lower machine, 15.2 ton counterweight, basic boom, hook, and other accessories.

**Base machine with gantry, boom base, crawlers, wire ropes for main and aux. winches, lower spreader and upper spreader.
